iRidium turns your iPhone / iPod / iPad or Windows device into the SMART BUS system control panel.

With the help of the iRidium GUI Editor you can create beautiful interfaces with animation and magnificent visual effects.

Import of channels and commands from the SMART BUS project is available. After the import completion, channels and commands are quickly bound to control elements (buttons, lists, sliders, text fields, etc.) using the drag&drop function.

iRidium for SMART BUS includes capabilities of another product - iRidium AV CONTROL. Owing to it you can fast and easy adjust AV equipment control.

iRidium software complex for SMART BUS includes 5 components:

[iRidium Client](#) - is installed on your iPhone / iPod / iPad or Windows device. iRidium Client controls your SMART BUS system with the help of a ready panel design.

[iRidium Wizard](#) - prepares the design created in the iRidium GUI Editor for its further uploading on your iPhone / iPod / iPad or Windows panel.

[iRidium Transfer](#) - uploads the converted design file on your iPhone / iPod / iPad. Not required for the Windows version.

[iRidium GUI Editor](#) - allows to create beautiful interfaces with animation and magnificent visual effects.

[iRidium GATE](#) - is used for simultaneous control from two and more devices (iPhone / iPod / iPad and Windows device) via one TCP/IP gateway for SMART BUS. iRidium GATE ensures stability of connection between iPhone / iPod / iPad and SMART BUS system. Moreover, you have decrease in system value as no additional TCP/IP gateways are required. The iRidium GATE can be installed on any Windows-based PC.

A single iRidium (iPhone / iPad / Windows) license allows to control your SMART BUS system from a single device (iPhone / iPod / iPad or Windows panel).
